DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

S. R. K. R ENGINEERING COLLEGE BHIMAVARAM

CERTIFICATE

This is to certify that this is a bonafied work on "**UNIHUB – Student Collaboration & Resource Sharing Platform**" for and has been submitted by **Mr. MANCHELLA VARUN (24B91A05H9), Mr. KOMMOJU SREE HARSHA NAGA VENKATA SAI (24B91A05F0), Mr. MOHAMMAD MAHAMOOD HUSSAIN KAZARANI (24B91A05K5), Mr. NAGIREDDY VENKATAKRISHNA MANI ANJANI KUMAR (24B91A05M4)** as a **Full Stack Development-1** laboratory report, in partial fulfilment of the requirements for the award of the Degree of Bachelor of Technology in Computer Science and Engineering, during the academic year 2025-2026. The candidates worked right under my Supervision and guidance.

Lecturers In-Charge
V.Priyadarshini
L.V.Srinivas
G.Prasanthi
Assistant professor,
Department of CSE,
S.R.K.R. Engineering College,
Bhimavaram.

Head of the Department
Dr.BH V S Rama Krishnam Raju
Head of the Department,
Department of CSE,
S.R.K.R. Engineering College,
Bhimavaram.

ABSTRACT

UniHub is a web-based platform built to bring university students together in one place whether they need to share notes, find past exam papers, or simply stay connected with what's happening around campus. It combines the feel of a mini social network with the practicality of a resource hub, making it easy for students to upload and download study materials, join discussions, and collaborate on projects without jumping between multiple apps or platforms.

At its core, UniHub is about peer-to-peer learning and community. Students can interact with each other through messaging and discussion forums, contribute resources that help others, and stay updated on academic and non-academic events all within a single, easy-to-use interface. The idea is simple: when students share knowledge freely, everyone benefits.

Think of UniHub as a digital common room, a space where a first-year student can find notes shared by a senior, a study group can coordinate without the chaos of endless group chats, and no one has to feel like they're navigating university life alone.

TECHNICAL STACK

HTML

HTML forms the structural backbone of UniHub. It is used to build and organize all the web pages defining elements like headers, navigation bars, forms, buttons, resource cards, and content sections. Every page a student sees on UniHub, from the login screen to the discussion forum, is structured using HTML. It essentially tells the browser what to display and in what order.

CSS

CSS is responsible for everything visual on UniHub the colors, fonts, layouts, spacing, and overall aesthetic. It transforms plain HTML structure into a clean, attractive, and user-friendly interface. CSS also handles responsiveness, ensuring that UniHub looks and works well across different screen sizes, whether a student is accessing it from a laptop, tablet, or mobile phone. It brings consistency and professionalism to the platform's design.

JAVA SCRIPT

JavaScript is what makes UniHub feel alive and interactive. While HTML builds the structure and CSS handles the appearance, JavaScript adds behavior and dynamic functionality. On UniHub, JavaScript powers things like form validation during login and registration, real-time updates in discussion forums, dynamic loading of resources without refreshing the entire page, interactive buttons, dropdown menus, and notification alerts. It essentially bridges the gap between a static webpage and a fully functional, responsive web application making the user experience smooth, fast, and engaging for every student on the platform.
